--Abstract

10 The aeration system is for aeration and/or mixing of water,
which system has at least one aeration unit that has a
pump/propeller inside a feed pipe. The feed pipe, to which
the water to be aerated, is sucked from beneath. The aeration
system has the feed pipe expanding in the upper part of the
aeration unit to a conical space working as a nozzle, via
15 which the water continues its way to at least one annular
opening. --
